### The product has the following features:

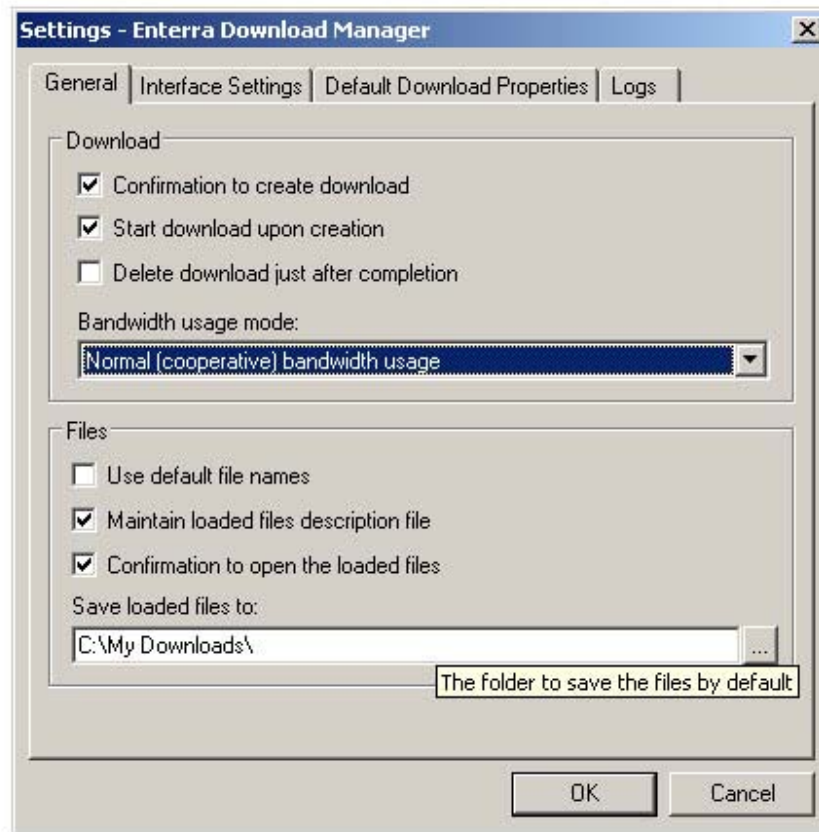

- Files download from remote servers via FTP and HTTP protocols;
- Store the list downloads (i.e. URL, files names and other information);
- Create downloads by interception by Internet Explorer (for version IE 6.0 and above); selecting corresponding items from Internet Explorer context menu; by dragging links in a window of the navigation panel or tool bar (drag-and-drop), as well as manually;
- Support of the Russian, English and German interface languages;
- HTTP (CERN-based) and FTP (TIS) proxy-servers support;
- Support of Basic and NTLM authentication for HTTP and HTTP-proxy servers connection;
- Support files upload resume on the connection break and restoration (if this feature is supported by the server);
- Restrict loading speed (the entering traffic) by the capability of a part of the communication channel to other applications which is especially important while working on low-bit-rate channels;
- Opportunity to prioritize downloads;
- Opportunity of downloading the file in simultaneous server connections that can accelerate process considerably (multi session download);
- Opportunity of conducting download registry (both general and download specific);

### Technologies:

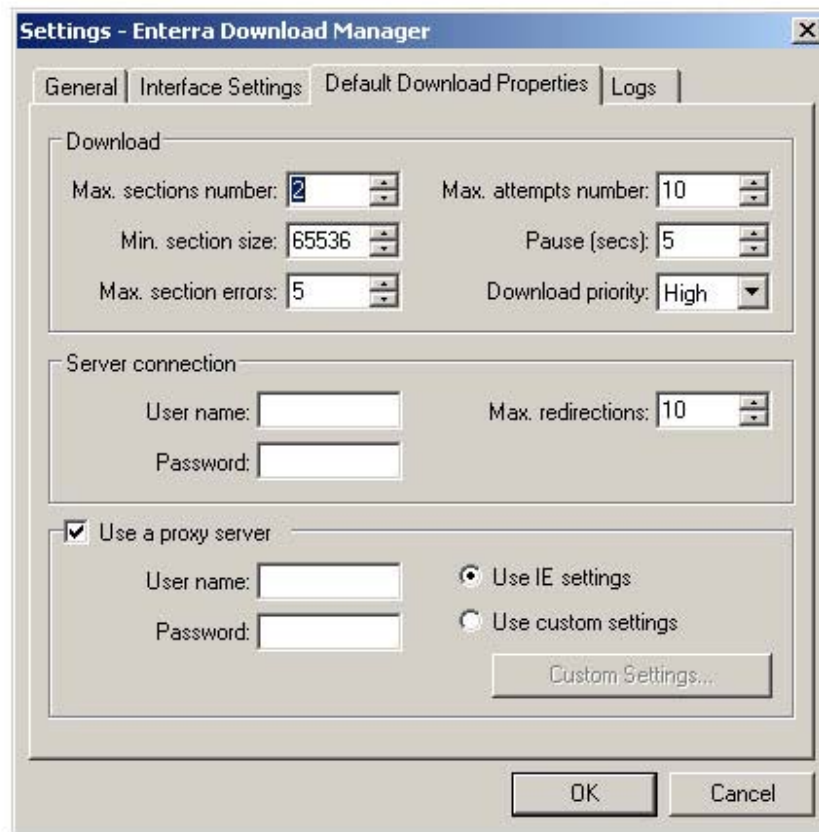

C++, Internet Explorer

Year: 2005-2006
