

FrogMagix

FrogMagix is a tool for images processing focused on data processing from digital devices (camera).

FrogMagix was built from scratch for managing, editing, and exporting images to be used on online auctions

Its main functions are:

- 1. Support of operations above set of files
- 2. Support of operations Crop, Resize, Hue/Saturation, Grayscale, Rotate, Add text
- 3. Capability to export files on FTP

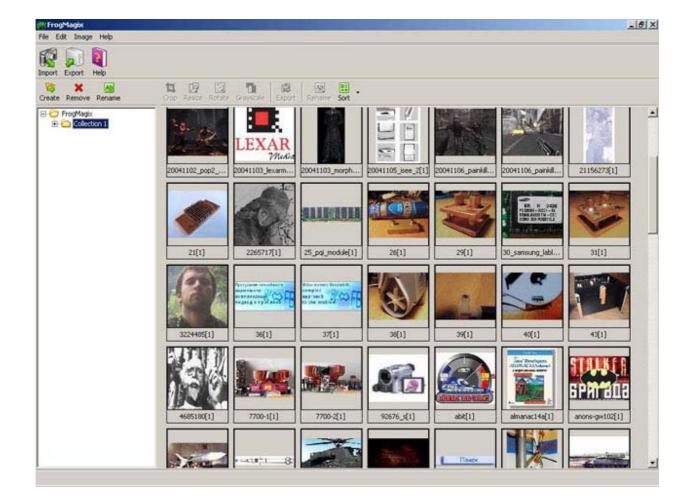

FrogMagix is a downloadable software application that lets you manage, crop, resize, rotate, and watermark your images «in bulk ", then export the images to an ftp server (any ftp server you wish) with one mouse click. It's the easiest and fastest way to manage, edit, and export images (to an image host) before you list an auction. The best part is it works with ANY image hosting/auction management company that supports FTP.

Technologies:

Java/SWT

Customer: **inkFrog**, **inc**. Year: 2005 URL: <u>http://inkfrog.com</u> poterrs
