

DTM

Decoding Test Manager is a system allowing a teacher of the English language to plan for tests, create tests, fix and analyze the results. The system focuses on American school students of 5-7 grades and allows generating tests in following areas:

- Alphabet and grapheme knowledge
- Phonological awareness
- Syllables
- Morphemes
- Sights

The system consists of two parts:

1. The School server carries the following functionality:
 - a. Management of students and classes
 - b. Management of tests and patterns
 - c. Management of dictionaries and texts
 - d. Print tests
 - e. Results input
 - f. Receive reports (including complex reports with statistical analysis)
2. The Support server
 - a. License Management
 - b. Software updates Management
 - c. Schools Management

The system is completely independent and delivered as ready to use server, with all necessary hardware and software.

Technologies:

Web (the client), J2EE (the application server), PostgreSQL (the database server)

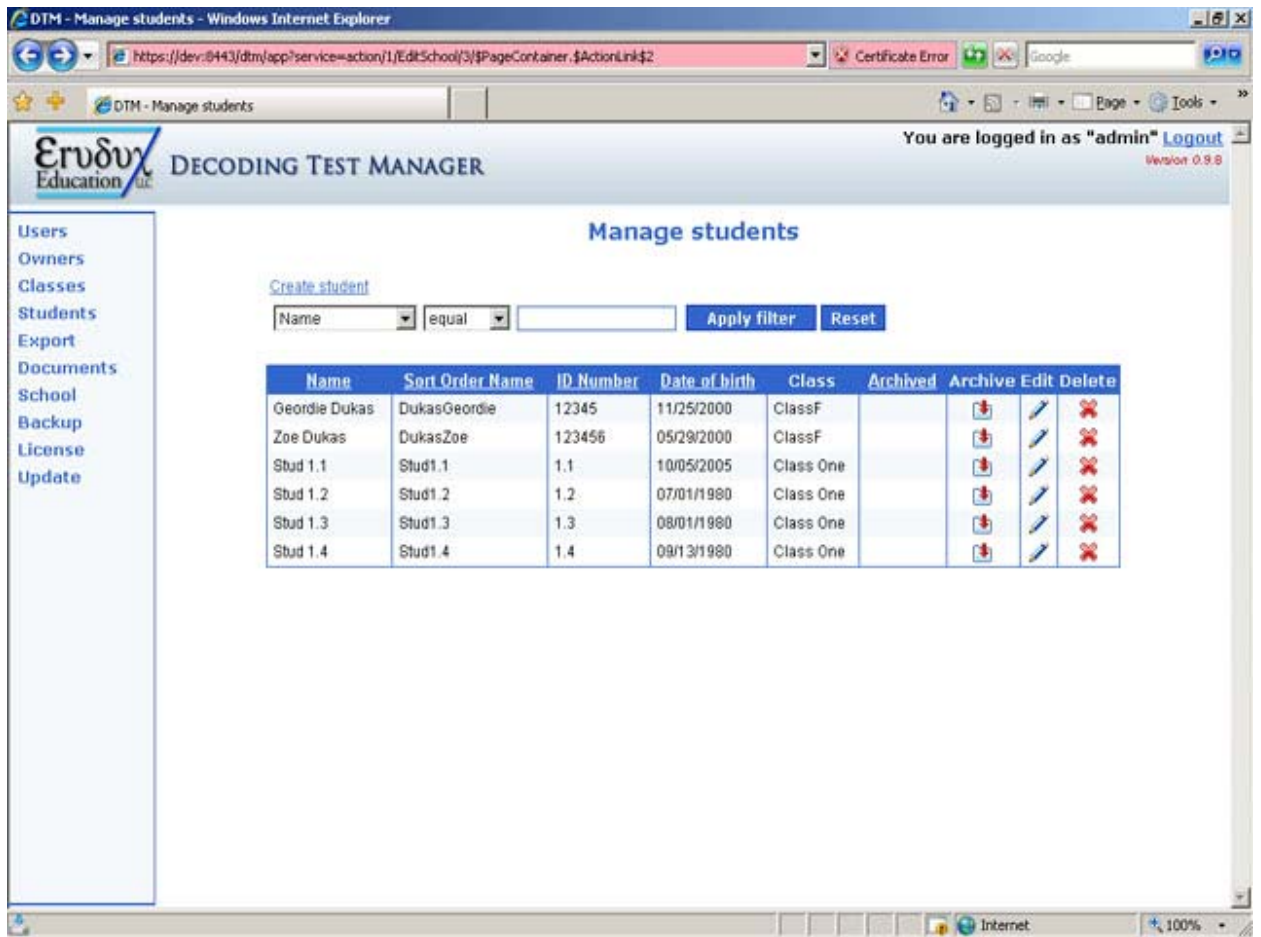

Customer: **Erudux LLC**

Year: 2004-2005
