SVN Importer

The SVN Importer tool provides for content import from various version control systems into the SubVersion repository. SVNImporter can be used for periodic and incremental synchronization of changes.

The following systems are supported now:

- CVS
- PVCS
- VSS
- ClearCase
- MKS

For each system the maximum set of functions is listed that may be a project on SubVersion, such as – tags, labels, branches etc is supported.

The system automatically fixes non-critical mistakes in repository-sources.
